Notes:

These questions are based on research about child care; you can read the research findings on the NACCRRA website under "Questions for Parents to Ask" at http://www.naccrra.org. Research-based indicators can only describe quality. Parents should base their decisions on actual observations.

* These are the adult-to-child ratios and group sizes recommended by the National Association for the Education of Young Children. Ratios are lowered when there are one or more children who may need additional help to fully participate in a program due to a disability, or other factors.

** Group sizes are considered the maximum number of children to be in a group, regardless of the number of adult staff.

*** Individuals working in child care can earn a Child Development Associate credential.
